**Fields**

Research: Industrial Organization, Applied Econometrics  
 Teaching: Industrial Organization, Microeconomics, Econometrics

**Education**

Ph.D., Economics, Northwestern University (anticipated) 2024  
 Committee: Igal Hendel (chair), Mar Reguant, Vivek Bhattacharya, Gaston Illanes  
 M.A., Economics, Northwestern University 2019  
 M.A., Economics, Universidad Carlos III de Madrid 2018  
 B.A., Economics, Universidad de la República Uruguay 2014

**Fellowships & Awards**

Dissertation University Fellowship, Northwestern University 2023–2024  
 Robert Eisner Graduate Fellowship, Northwestern University 2021  
*The department's highest honor bestowed on a graduate student entering fourth year.*  
 Graduate Fellowship, Northwestern University 2018–2022  
 Graduate Fellowship, Universidad Carlos III de Madrid 2016–2018  
 Fellowship for Masters Abroad, Agencia Nacional de Investigación e Innovación, Uruguay 2016 (Declined)  
 Introduction to Research Scholarship. Agencia Nacional de Investigación e Innovación, Uruguay 2013

**Teaching Experience**

Teaching Assistant, Northwestern University 2019–2021  
 Intermediate Industrial Organization (undergraduate), Microeconomics III: Game Theory (graduate), Math Camp (graduate)  
 Teaching Assistant, Universidad Carlos III de Madrid 2017  
 Econometrics (undergraduate, graduate), Industrial Organization (graduate)  
 Teaching Assistant, Universidad de la República Uruguay 2014  
 Algebra, Calculus, Statistics, Econometrics (undergraduate)

**Research Experience**

Research Assistant, Mar Reguant, Northwestern University 2019–2020  
 Research Assistant, Centro de Investigaciones Económicas Uruguay 2013–2016

**Refereeing**

International Journal of Industrial Organization

**Job Market Paper**

“Reducing Consumer Inertia in Tobacco Markets”, with Gaston Lopez ([link](#))  
*Abstract:* We study the equilibrium effects of tobacco control policies. While tobacco regulation often targets consumers, understanding firms’ responses is essential for accurately evaluating the impact of these policies on consumption. We highlight that consumers’ dependence on cigarettes, which we refer to as *consumer inertia*, introduces dynamic incentives for firms. Thus, we develop a dynamic oligopoly model and estimate it using product-level data and a panel of smokers. Leveraging large tax fluctuations and a policy that forced approximately 40% of products out of the market, we show

that consumers face significant addiction and brand loyalty. We use these estimated preferences to demonstrate the importance of considering firms' dynamic incentives to explain their observed behavior. Lastly, we propose a tractable equilibrium notion to compute market outcomes. We use this framework to examine the counterfactual effect of uniform packaging restrictions and caps on nicotine concentration. We show that firms' responses tend to reinforce the direct effect of these policies. Supply responses strengthen the direct effect because companies' incentives to attract new consumers decrease, since retaining them in the future becomes harder. These dynamic incentives reverse firms' short-term considerations. For example, firms can amplify the impact of uniform packaging even though demand elasticity increases by up to three times and the expected number of products expands by as much as 30%.

**“How Governments Engage in Price Discrimination? Evidence from a Large Scale Nationalization”**, with Gaston Lopez ([link](#))

*Abstract:* State-owned enterprises (SOEs) have the potential to correct market failures, but they are also subject to the influence of politics and interest groups. We examine this trade-off in the context of the nationalization of the leading gasoline company in Argentina. Descriptive analysis suggests that pricing patterns changed after the nationalization. First, the government exerted less market power, charging lower prices on average and benefiting consumers. Second, it engaged in less economic price discrimination, reducing the correlation between prices and consumers' willingness to pay. Third, it engaged in political price discrimination, charging lower prices in provinces with political connections with the state-owned firm. Motivated by these findings, we develop and estimate a model of gasoline supply and demand under market power and recover the government's objective function. We find that public provision lead to welfare gains but is also associated with redistributive motives. Compared to a benevolent planner that internalizes the welfare of all consumers and firms equally, the government set prices as if it only cares about favoring middle-income consumers and consumers in provinces that have political ties with the firm. Lastly, we use the model to assess the company's response to policy alternatives, including pricing rules that align government actions with the public interest and are in place in government agencies worldwide. Our findings show that rules effectively reduce the influence of politics in pricing but are associated with higher costs: they mitigate half of the welfare gains generated by the nationalization and increase the taxpayers' burden by 10%. These findings emphasize the importance of politics and interest groups in shaping governments' decision-making process and the role of SOEs as instruments for redistribution.

**“Bounding Outcomes in Counterfactual Analysis”**, with Mar Reguant ([link](#))

*Abstract:* In many economic settings, counterfactual analysis can be difficult for two reasons: (i) we do not know how to compute the equilibrium of the game, or (ii) even if we know how to compute one equilibrium, the game might feature multiple equilibria, which are challenging to characterize exhaustively. We propose a bounding framework to allow for counterfactual analysis even when these problems might arise. The method relies on determining valid (conservative) bounds to counterfactual outcomes that contain any outcome that could be sustained in equilibrium, i.e., any outcome that can be supported by a set of equilibrium constraints. To ensure that all potential solutions are considered, We propose to reframe equilibrium constraints as a relaxed mixed-integer linear program. We show that the framework can also be used to narrow down equilibria by imposing additional equilibrium constraints. We provide examples of static price competition with differentiated products, dynamic games, and multi-unit auctions, three areas where counterfactual analysis faces these challenges.
